Build Measure Machine Learn with Angular

Anna Karpacheva | Sumit Arora

April 2017

Rangle.io

Create Web and Mobile Apps that Move as Fast as Your Business.

By developing more than 90 JavaScript projects in the last three years, we have brought unparalleled experience in Angular, React and Node to our projects. From innovative new startups to successful enterprises, we create remarkable applications that exceed our client's business goals

Rangle Presents

@arorasumit

Sumit Arora Developer

Sumit is a full-stack developer at Rangle. Worked on Augury developing new features and components extensively. Currently working on Angular CLI.

Interested in data visualizations, analysis and Machine Learning. When I am not coding Angular, I usually play around with applications making use of Scala, Spark and Machine Learning.

Anna Karpacheva Business Quality Analyst

Anna is passionate about data, visualization and Big Data technologies. She likes to make sense of data flow, user experiences and the outcomes useful for business development.

Prior to Rangle Anna was involved in Big Data Project for Wealth Management in one of the largest bank in Canada and was a member of Oracle/Eloqua Business Intelligence team.

What if you could:

Contact Us

Redux Beacon

- → Map Redux or ngrx actions and state to your analytics data model
- → Centralize your analytics logic (keep action creators clean)
- → Send analytics events to multiple targets (e.g. Google Analytics or your own custom endpoint)

```
const pageView = {
 eventFields: (action: Action): PageView => ({
   hitType: 'pageview',
   page: action.payload.path,
 }),
};
const eventsMap = {
  '[Router] Update Location': pageView,
};
const analyticsMetaReducer=
  createMetaReducer(eventsMap,
  GoogleAnalytics);
```

Feature Toggles

- → Like *nglf but controlled by a configuration file or cloud service
- Manage switch state in config files or cloud service
- → If statements in code or inversion of control/strategy design pattern
- → Supports branch based development & avoid big destabilizing merges
- → AB Tests, Canary Releases

```
<button
 *ngIf="feature1"
className="bg-black col-2">
</button>
export const featureToggleConfigs:
IFeatureToggleConfigSet = {
  'feature1': {
    setting: false,
    responsible: 'Fred Blogs',
   Description: 'A of AB Test',
    shouldExpireAt: new Date('2020-08-10'),
};
```

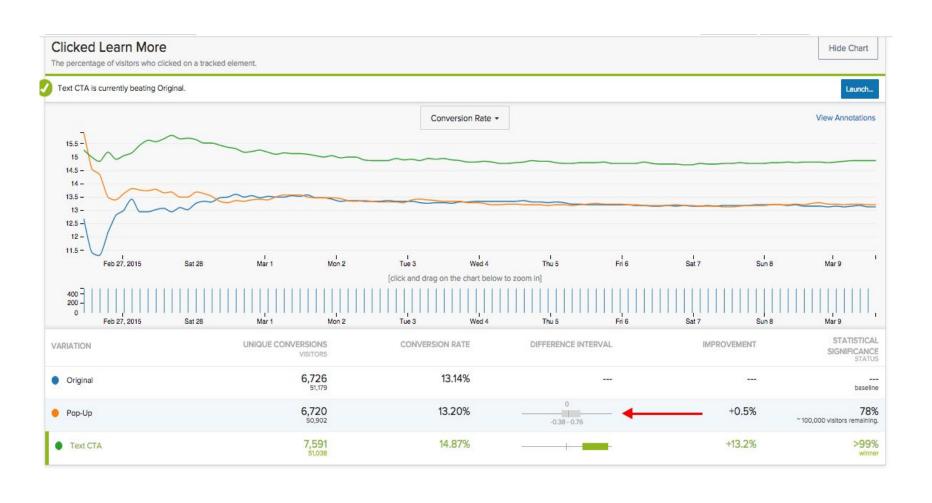

AB Testing

Almost anything on your website that affects visitor behavior can be A/B tested.

What can you test?

- → Headlines
- → Paragraph Text
- → Call to Action Text
- → Colors
- → Images
- → Entire Flows
- → Major Features

Personalization

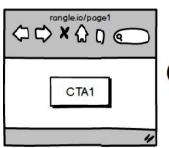

- → Understand your audience
- → Personalize the experience based on your learning
- → More optimal then A or B for everyone

```
private countryToCTA(countryCode: string): string {
 switch (countryCode) {
  case 'CA':
  case 'US':
  default:
this.ipInfo.getIPInfo(ip).subscribe(ipData => {
 this.featureToggleActions.toggleFeatureSetting(
    {cta: this.countryToCTA(ipData.countryCode)});
@Component({
 selector: 'call-to-action',
 template:
     <div *showIfFeature="'cta===contact-us">
      Contact US
     <div *showIfFeature="'cta===online-training">
      Online Training
     <div *showIfFeature="'cta===in-office-training'">
      In Office Training
```

Machine Learning

- → Custom redux-beacon target
- → Sends Raw data set
- → Saving to database

```
export const analyticsMiddlewareCustom =
createMetaReducer(eventsMap, sendEvents);
function sendEvents(events) {
 events.forEach((event) => {
    analyticsSubject.next(event);
 });}
export const analyticsSubject: Subject<any> = new
Subject();
analyticsSubject.subscribe(this.sendEvent.bind(this));
sendEvent(event: any) {
 const ip = this.sessionService.getCookie('ip');
 event.sessionId = this.sessionService.checkSession();
 event.ip = ip;
 this.http.post(`${this.API PATH}`, event)
    .map(r \Rightarrow r.json())
    .subscribe((data) => {
      this.store.dispatch(new
          actions.PredictionReceived(data));
    }); }
```

Session Data Summarized for Machine Learning

Demo

Machine Learning Recap

- → Save the data
- → Convert that data to vectors
- → Train the predictive model
- → Generate the rules
- → Do the predictions :)

Recurrent Neural Networked Generated Code

```
* Increment the size file of the new incorrect UI FILTER group information
* of the size generatively.
static int indicate policy(void)
 int error;
 if (fd == MARN EPT) {
     * The kernel blank will coeld it to userspace.
   if (ss->segment < mem total)
     unblock graph and set blocked();
   else
     ret = 1;
   goto bail;
 segaddr = in SB(in.addr);
 selector = seg / 16;
 setup works = true;
